Chapter 1

Memory Usage library for Arduino AVR targets

This Arduino library prints memory usage on the Serial port.

Features

This library provides:

- Print memory usage on the serial console
- Get stack and heap size
- Get .data and .bss sections size

Examples

Arduino IDE | Examples | Erriez Memory Usage:

- [PrintMemoryUsage](#)

Documentation

- [Doxygen online HTML](#)
- [Doxygen PDF](#)

Print memory usage on serial port

```
{c++}
void setup()
{
  // Initialize serial port
  Serial.begin(115200);

  // Print memory usage
  printMemoryUsage();
}
```

Output serial port Arduino Uno

```
{c++}
SRAM size: 2048 Bytes
.data size: 22 Bytes
.bss size: 170 Bytes
Stack size: 2 Bytes
Heap size: 0 Bytes
Free mem: 1854 Bytes
```

Get RAM size

Get total on-chip SRAM size in Bytes:

```
{c++}  
unsigned int ramSize = getRamSize();
```

Get free memory

Get free memory size which can be allocated between stack and heap:

```
{c++}  
unsigned int freeMemSize = getFreeMemSize();
```

Get stack size

```
{c++}  
unsigned int stackSize = getStackSize();
```

Get heap size

```
{c++}  
unsigned int heapSize = getHeapSize();
```

Get .data section size

```
{c++}  
unsigned int dataSize = getDataSectionSize();
```

Get .bss section size

```
{c++}  
unsigned int bssSize = getBssSectionSize();
```
